1 Objective and general approach

The aim of this report is to compare, in the most homogeneous terms possible, the employment data obtained from the Affiliation to Social Security and the Economically Active Population Survey (EAPS) in order to analyse the coherence of both sources of information. The reference period for the data covered by this study is the second quarter of 2016.

This report is the third prepared with the Census 2011 population base, currently in force, for the EAPS data. Its results are therefore fully comparable with those for the second quarter of 2012 (Q2-2012) and the second quarter of 2014 (Q2-2014) and are available on the INE website¹.

The data on affiliation to Social Security comes from the statistical use of the databases maintained by the General Social Security Treasury (Ministry of Employment and Social Security-MEYSS). The estimates provided by the Economically Active Population Survey (EAPS) are obtained from the information, collected through personal or telephone interviews with the households selected in the survey sample. The EAPS is the source of reference statistical information comparable at the international level.

Both the Affiliation and the EAPS have their own particularities, derived from their own methodology and purposes, and reflect the evolution of employment in Spain filtered through their respective specificities. For a comparison of results, it is necessary to make adjustments to the groups covered in each case and to homogenise the reference period of the data.

Broadly speaking, the methodology of the comparison consists of adjusting the Affiliation information so that it is as close as possible to the concepts measured in the EAPS. For this purpose, data are obtained on the natural persons affiliated² to the Social Security who have been registered at some point in time for each of the thirteen weeks of the calendar that constitutes the reference period of the comparison, in this case the Q2-2016, and then the average of these thirteen weeks is calculated.

To this new average, it has been added the figures provided by the Mutual Insurance Societies for Public Employees (MUFACE, MUGEJU and ISFAS), corresponding to the second quarter of 2016, since they are workers not included in the Affiliation. This magnitude is called Adjusted Affiliation and is the one that is compared in the annex results with the estimates of the EAPS.

¹ http://www.ine.es/daco/daco42/daco4211/compa_empleo_bp11_2014.pdf , report corresponding to Q2-2014 and http://www.ine.es/daco/daco42/daco4211/compa_empleo_bp11_2012.pdf , report corresponding to Q2-2012.

There are previous reports, but the results of the EAPS are calculated on the basis of the population base prior to the current one.

² Some groups are not taken into consideration, precisely to get closer to the EAPS concept. For a complete list of the adjustments made, see Section 3.

This document shows, together with a brief overview of the definitions and main characteristics of the two statistical sources, the results obtained from the process of comparing the employment data from the two operations relating to Q2-2016 and a descriptive commentary on them.

2 Definitions and peculiarities of the sources of information on EAPS employment

EAPS Employed persons

The definition of the **employed population according to the EAPS** follows the methodology of the International Labour Organization (ILO). Employed persons are all those persons aged 16 years old or over who, during the reference week, have been employed or self-employed, according to the definitions given below.

• **Persons employed by others or salaried employees** are all those who fall into the following categories:

- *Working*: persons who, during the reference week, have worked, even sporadically or occasionally, for at least one hour in exchange for a salary, wage or other form of related payment, in cash or in kind.
- *Employed but not working*: persons who, having already worked in their current job, are absent from it during the reference week and have a close link with it.

Salaried employees may carry out their work in public or private companies or bodies.

• **Self-employed persons** are all those included in the following categories:

- *Working*: persons who, during the reference period, have worked, even sporadically or occasionally, for at least one hour in exchange for a benefit or a family earning, in cash or in kind.
- *Employed but not working*: persons who during the reference period had to perform some work in exchange for a family benefit or earning but were temporarily absent from it due to illness or accident, vacations, holidays, bad weather or other similar reasons.

Self-employed workers include employers, employers without employees and own-account workers, members of cooperatives and contributing family workers.

Considering the length of the working day, employed persons are classified as *full-time* and *part-time* employed persons. The usual working week may not be shorter than 30 hours in the first case, nor exceed 35 hours in the second.

Salaried employees are classified as *permanent* and *temporary*. For the latter, the end of their contract or work relationship is set by means of objective conditions, such as the expiry of a certain period of time, the completion of a specific task, etc.

Peculiarities of the employment estimation provided by the EAPS: The employment figures of the EAPS are representative of the average situation during the reference quarter of the survey. The data is assigned to the central point of this period.

It should be borne in mind that it does not include persons employed in collective establishments. Nor does it adequately reflect temporary workers who do not have their habitual residence in a family dwelling in our country.

The EAPS data refer to the population resident in Spain.

For this study, the results of the EAPS have been calculated based on the location of the establishment where the person works.

Affiliation

• **Social Security Affiliates:** The Affiliation data reflects the number of registered workers who carry out a work activity as such (neither unemployed nor students are included), so they are obliged to contribute to the public system for the protection of, at least, retirement, disability and death situations.

The number of affiliates corresponds to those who are registered in the different Social Security systems.

Peculiarities of Social Security Affiliation: The Affiliation data, like all those coming from administrative registers, is sensitive to the legislative variations that affect it. The Social Security Affiliation file may also contain fictitious contributors seeking to obtain a retirement pension in the future (Special Agreements) or the right to receive unemployment benefit. These groups cannot be considered as registered workers and, therefore, are not employed persons. They have not been taken into account in the Affiliation data used in this comparison.

There are employed persons according to the EAPS who are not obliged to contribute to Social Security, as is the case with some contributing family workers (this category of workers must be affiliated to Social Security only when they work in a regular, fundamental and direct manner). There may also be people who are required to be affiliated and they are not.

The Social Security Affiliation file does not include public employees who are members of their own Mutual Insurance Societies as long as they do not carry out any other activity that determines their inclusion in any of the Social Security System schemes.

It also does not include students who do not carry out a work activity.

The papal clergy (contemplative orders) is registered in the Affiliation but does not carry out an economic activity in the strict sense, as considered in the EAPS.

For this reason, they have been excluded from the calculation of affiliates, as well as workers in Penitentiary Centres, because their residence does not correspond to a family household.

- **Mutual Insurance Affiliates:** These are people who are affiliated to one of the Mutual Insurance Societies for public employees (MUFACE, MUGEJU or ISFAS).
- **Affiliates:** In this document, the term Affiliates is used to refer to all persons who are affiliated to the Social Security or to any of the Mutual Insurance Societies for public employees. Those who possess both situations are counted only once.

The Affiliation data refers to the population working in Spain, whether or not they are resident in our country.

3 Methodology of the comparative study of employment

To carry out this comparative study with the employment data from the EAPS and Affiliation, taking into account the aforementioned definitions and observations, the following operations are conducted:

- **EAPS Employment** is obtained directly from the survey. It therefore refers to the employment of persons residing in family households (reference scope of the survey). In addition, it has been selected those persons whose place of work is located in Spain.
- The number of registered affiliates for at least one day for each of the 13 reference weeks of the second quarter of the EAPS is extracted from the Social Security databases and the arithmetic mean of the 13 figures is calculated. This arithmetic mean is considered as the quarterly data of the Social Security affiliates for the purposes of this study. This figure does not include the following groups:
 - Special Agreements and beneficiaries of unemployment benefits, not considered in the data extraction.
 - The papal clergy.
 - Employees in Mutual Insurance Societies who are simultaneously affiliated with the Social Security.
 - Convicted persons in Penitentiary Institutions who carry out work for which they are required to register with the Social Security Administration.

All of them have been deducted from the Social Security Affiliation data.

- To this arithmetic mean is added the employees affiliated to their own Mutual Insurance Societies (MUFACE, MUGEJU and ISFAS), thus obtaining the **adjusted Affiliation** figure - quarterly data to carry out the comparison with the EAPS Employment.

4 Comments on the results

4.1 Comparison of employment data by Autonomous Community

The employment figure obtained from the Economically Active Population Survey exceeded the data derived from the adjusted Affiliation by 531,600 people. The Autonomous Communities with the greatest differences and with the highest number of EAPS employed persons, in absolute terms, were Comunitat Valenciana, Andalucía and Illes Balears, with 136,300, 64,600 and 55,800 people respectively. In turn, Comunidad de Madrid presented higher adjusted affiliation figures. The rest of the Autonomous Communities that were in this same case had differences that were not statistically significant (see Table 1).

4.2 Comparison of employment data by professional status, sex, age and Autonomous Community. Agricultural and non-agricultural sectors

The comparison includes the *group of public employees affiliated to the different Mutual Societies among employed workers in the non-agricultural sector*.

Non-agricultural sector

It can be seen that, within the non-agricultural sector, the EAPS estimate was higher than the adjusted Affiliation figure for the national total, a situation that prevailed for both employed workers (520,800 persons) and self-employed workers (29,300 persons) (see table 2.1).

By professional status, in the case of men, the difference between employed and self-employed workers showed figures in favour of the EAPS (262,700 and 31,600 persons respectively). For women, there was the same situation as for employed workers (258,100 people), exceeding the affiliation data to that of self-employed workers in the EAPS (2,300 people) (see table 2.1).

With regard to age, for salaried employees in the non-agricultural sector, the differences between EAPS employment and the adjusted Affiliation in favour of the EAPS were observed between 25 and 59 years of age (considering both sexes), while at older ages (60 or over), as well as in the 16-24 age group, discrepancies in favour of adjusted Affiliation were observed (see table 3.1.1). With respect to the self-employed in the non-agricultural sector, in all age groups the EAPS estimate exceeded the adjusted Affiliation estimate, except for the age groups of 20 to 29, 35 to 39 and 50 to 54 years (see table 3.1.2).

Agricultural sector

As regards the agricultural sector, the EAPS figure was lower than the Affiliation figure³. However, this pattern which remained unchanged for employed workers (36,800 persons of difference) changed when the study was carried out on self-employed workers (18,300 persons of difference in favour of EAPS employment) (see table 2.2).

If we consider the sex variable, in the case of women, in the situation of both employed and self-employed workers, the adjusted Affiliation figure exceeded EAPS employment in both cases (39,800 and 5,400 persons, respectively). On the other hand, for men, the adjusted Affiliation figures were lower than EAPS employment in both cases (3,000 and 23,700 persons) (see Table 2.2).

When considering the distribution of employed workers in the agricultural sector by age group, it was observed that the greatest discrepancies between EAPS employment and Affiliation, in favour of the latter, were found in the 30 to 44 age group, while the greatest difference in favour of EAPS employment was observed in the 50 to 54 age group (see table 3.2).

4.3 Comparison of employment data by economic activity and professional status

When carrying out this comparison, it should be borne in mind that the group of public employees affiliated to Mutual Societies has been assigned to the following activities of CNAE-09: activity 84 (Public administration and defence; compulsory social security), 85 (Education), 86 (Human health activities), 87 (Residential care activities) and 88 (Social work activities without accommodation). The assignment has been made based on the body to which they belong.

It is also necessary to take into account in this comparison that the economic activity of the EAPS refers to the establishment where the interviewee works and the one recorded in Affiliation is the one declared by the company.

The branches of activity that contribute most to the difference in favour of the EAPS employment were those corresponding to Activities of households as employers of domestic personnel (branch 97, 195,770 persons), Education (branch 85, 111,500 persons), Accommodation services activities (branch 55, 86,400 persons), Insurance, reinsurance and pension funding (branch 65, 85,000 persons), Manufacture of motor vehicles, trailers and semi-trailers (branch 29, 63,800 persons) and Services to buildings and landscape activities (branch 81, 60,100), among others (see table 4.1).

The greatest differences in favour of adjusted Affiliation were concentrated in Public Administration (branch 84, 214,700 persons of difference), Office administrative, office support and other business support activities (branch 82, 191,400 persons), and to a lesser extent in the branch that encompasses

³ In Affiliation (agricultural sector), public employees affiliated to their own mutual insurance societies were not included, as they were not relevant in this sector.

Wholesale trade (branch 46, 175,400 persons), among others (see table 4.1). In the first case, the most likely reason was the non-inclusion in the EAPS of the Armed Forces resident in barracks and the under-representation of civilian and military officials posted abroad.

With regard to Education (branch 85) and Public Administration (branch 84), the incorporation of MUFACE data assigning the different bodies of public employees by branches makes it difficult to differentiate the various general bodies that work in teaching institutions of Primary, Secondary or University Education and classify them in branch 85. This may partly explain the differences in these branches of activity.

With regard to domestic service (branch 97, 630,300 employed in the EAPS compared to 434,505 in adjusted Affiliation), there was a difference of about 195,770 persons. It should be recalled that, in the same way as in the 2014 edition, the EAPS estimate for domestic service, which usually works 20 hours or less per week, has not been added to the Social Security figure as it had been usually done in previous studies (see table 4.1).

If economic activities are considered in aggregate, it can be observed that the greatest positive differences in favour of the EAPS were found in the branches corresponding to industry (branches 16-39) and to the same extent in the branches corresponding to Other services (mainly in the Activities of households as employers of domestic personnel, branch 97). On the other hand, the highest discrepancies in favour of adjusted Affiliation were observed in Public Administration and Defence; Compulsory Social Security (branch 84), in other business activities (branches 69-82) and in the branches of Wholesale and retail trade and repair of motor vehicles and motorcycles and Wholesale and retail trade (branches 45-47) (see table 4.2).

4.4 Comparison of employment data in trade and accommodation by professional status, sex and Autonomous Community

The comparisons of the branches of activity of Trade and Accommodation (branches 55-56) should not be affected by the group of employees in the Mutual Societies (MUFACE, MUGEJU and ISFAS).

In Trade and Accommodation the EAPS employment was lower at the national level than that obtained from Affiliation. The same behaviour was also seen mainly in Cataluña and Comunidad de Madrid, where the figures for Affiliation were higher than those of the EAPS by 86,300 and 37,300 people respectively. However, the Autonomous Communities of Canarias and Comunitat Valenciana did not follow this pattern. In the latter, the EAPS estimated a higher level of employment in Trade and Accommodation (54,200 and 29,900 people respectively) (see table 5.1).

4.5 Comparison of employment data by characteristics of the contract and Autonomous Community

In order to carry out the comparison of employment data according to the characteristics of the contract, only the group of salaried employees has been considered and it has been studied whether their employment relationship was permanent or temporary. It should be noted that ***the group of public employees affiliated to the Mutual Societies has been assimilated to employed workers whose employment relationship is permanent and whose working hours are full-time.***

Type of employment relationship

The number of salaried employees obtained from the EAPS was higher than that obtained from adjusted Affiliation by 483,900 people (see table 6.1). This situation was the same for personnel with permanent contracts where the difference amounted to 530,700 people, and in the case of temporary contracts the EAPS employment figure was lower than the adjusted affiliation figure by 46,800 people.

The Autonomous Communities with the greatest differences and the highest number of EAPS salaried employees, in absolute terms, were Comunitat Valenciana and to a lesser extent, Canarias and Andalucía, with 125,700, 49,500 and 48,300 people respectively. On the other hand, only Comunidad de Madrid had a significantly lower number of EAPS salaried employees than that obtained in the Adjusted Affiliation (22,500 people) (see table 6.1).

Within temporary contracts, the greatest discrepancies were in favour of adjusted Affiliation in Andalucía and Cataluña (51,900 and 38,400 respectively), and in favour of the EAPS figures in Comunitat Valenciana (41,300 people) (see table 6.1).

Type of working day

In order to compare the type of working day in both sources, the group formed by fixed-discontinuous employees has been excluded from the adjusted Affiliation data as well as from the figures estimated by the EAPS. This exclusion was due to the fact that the categories considered in the Social Security Affiliation do not coincide with those of the EAPS, so that if this group were not excluded, both sources of information would not be comparable. Specifically, for Social Security, the type of working day for employed workers may be full-time, partial or fixed discontinuous. However, in the EAPS, it can only be full-time or partial, and the fixed discontinuous ones may have any of these two types of working days. This is therefore the reason why it has been decided to exclude the fixed discontinuous employees and to carry out the comparison for the rest of the employed workers.

At the national level, the difference between full-time employees (excluding fixed-discontinuous) was 2,210,800 persons in favour of the EAPS, while in the case of part-time employees, the difference was 1,646,900 persons in favour of adjusted Affiliation. The Autonomous Communities that contribute most to these differences were, in the first case, Cataluña, Comunidad de Madrid, Andalucía and Comunitat Valenciana (378,400, 328,200, 276,800 and 244,300 people of difference respectively). In the case of the part-time working day, the greatest discrepancies were found in Comunidad de Madrid, followed by Cataluña and Andalucía (349,800, 313,000 and 221,200 people in favour of adjusted Affiliation) (see table 6.2).

It should also be borne in mind, in explaining these differences, that the concepts of part-time and full-time working hours do not coincide in the two sources.

4.6 Comparison of employment data for foreign nationals by professional status, economic activity and Autonomous Community

The analysis of the differences in the employment of foreigners was practically unaffected by the group of **employees in Mutual Societies** (MUFACE, MUGEJU and ISFAS). In the case of MUFACE, the nationality of mutual insurance affiliates is recovered from the type of identification document they have, assimilating all those who identify with the NIE as **foreigners from the European Union**. In the case of MUGEJU and ISFAS, the study is carried out under the hypothesis that all the mutual insurance affiliates are Spaniards. In the EAPS, when a person has dual nationality (Spanish and foreign), he or she is considered to be a Spaniard.

From the figures obtained, we can observe the following:

- The EAPS estimated 59,800 **foreigners from the European Union** more than the Adjusted Affiliation. This difference in favour of the EAPS was almost entirely concentrated in employed workers (48,800 persons) (see table 7.1).

The branches of activity that contributed most to the difference in favour of the EAPS were the Activities of households as employers of domestic personnel (branch 97, 24,000 persons of difference), Education (branch 85, 10,600 persons), Retail trade (branch 47, 9,300 persons) and Construction of buildings (branch 41, 8,900 persons of difference) (see table 8.1).

- When considering **foreign nationals from the rest of the world**, the EAPS exceeded the data derived from the adjusted Affiliation by 296,900 persons. The EAPS figure was higher for both employed workers (difference of 260,400 persons) and self-employed workers (difference of 36,600 persons). Comunitat Valenciana, Canarias, Andalucía and Comunidad de Madrid were the Autonomous Communities that contributed most to these differences (see table 7.2). The largest differences in employed persons in favour of the EAPS were concentrated in the activities of households as employers of domestic personnel (branch 97, 83,900 persons), in accommodation services (branch 55, 36,000 persons) and in retail trade (branch 47, 29,700 persons) (see table 8.1).

5 General conclusions

- As can be seen, the EAPS employment figure was still higher than the Adjusted Affiliation data (531,600 people in favour of the EAPS employment). This situation was maintained when analysing the figures by nationality, both for Spaniards and for foreign nationals (174,900 and 356,700 persons of difference respectively).
- The differences by sex indicated that there were 321,000 more men employed according to the EAPS and 210,600 women.
- The differences between the figures provided by the EAPS and those obtained through Adjusted Affiliation could be explained by the fact that the EAPS may include unregistered employment.
- It may also be influenced by the fact that the EAPS seeks to obtain the "de-facto" professional status. Consequently, those independent workers who work as salaried employees would be considered in the EAPS as employed workers.
- Discrepancies by economic activity could result from the different way of classifying them in the sources of information. In the EAPS, the activity is assigned by coding what is declared by the respondent and in Affiliation, by the code corresponding to the activity declared by the company.
- The employment in the EAPS was 530,700 higher for salaried employees with permanent contract. On the other hand, the adjusted affiliation presented 46,800 more temporary employees (see table 6.1).
- The large differences by type of working day were explained by the fact that in Affiliation work below the threshold of 40 hours per week is considered part-time (see table 6.2).
- The highest employment in the EAPS among foreigners was observed both in the EU (59,800) and in the rest of the countries (296,900) (see tables 7.1 and 7.2).

¹ SS AFFI = Social Security Affiliates

² Difference (in absolute values) = EAPS - SS AFFI.

- In the EAPS, the Autonomous Community refers to the workplace.

- The *Other Status* category of the EAPS (residual category) is included in the self-employed workers.

- In SS AFFI there is one *non-recorded sex* that is included in the total, therefore it does not coincide with the sum of men and women.

- SS AFFI (agricultural sector) does not include employees who are affiliated to their own mutual insurance companies, as they are not relevant in this sector.

¹ Adjusted AFFI (Adjusted Affiliation) = Social Security Affiliates + Mutual Insurance Affiliates

² Difference (in absolute values) = EAPS - Adjusted AFFI

³ ANNEX CNAE-09

- Adjusted AFFI includes employees affiliated to their own mutual insurance companies.

(*) In the second quarter of 2016, there were 122,633 and 77,961 persons in the Armed Forces and the Civil Guard, respectively, in a situation equivalent to the EAPS definition of employed persons; the EAPS estimate for the same groups residing in family dwellings amounted to 82,883 and 64,647 respectively. This would mean 53,064 employed persons in branch 84 who would be in collective establishments for Adjusted Affiliation.

¹ SS AFFI = Social Security Affiliates

² Difference (in absolute values) = EAPS - SS AFFI.

- In the EAPS, the Autonomous Community refers to the workplace.

- The *Other Status* category of the EAPS (residual category) is included in the self-employed workers.

- In SS AFFI there is one *non-recorded sex* that is included in the total, therefore it does not coincide with the sum of men and women.

- SS AFFI (Trade and Accommodation) does not include employees who are affiliated to their own mutual insurance companies, as they are not relevant in this sector.

¹ Adjusted AFFI (Adjusted Affiliation) = Social Security Affiliates + Mutual Insurance Affiliates

² Difference (in absolute values) = EAPS - Adjusted AFFI

³ ANNEX CNAE-09

- Adjusted AFFI includes employees affiliated to their own mutual insurance companies.

(*) In the second quarter of 2016, there were 122,633 and 77,961 persons in the Armed Forces and the Civil Guard, respectively, in a situation equivalent to the EAPS definition of employed persons; the EAPS estimate for the same groups residing in family dwellings amounted to 82,883 and 64,647 respectively. This would mean 53,064 employed persons in branch 84 who would be in collective establishments for Adjusted Affiliation.

ANNEX IV

CLASSIFICATION OF ECONOMIC ACTIVITIES 2009: CNAE-09

SECTION A: AGRICULTURE, LIVESTOCK, FORESTRY AND FISHING

01. Crop and animal production, hunting and related service activities
02. Forestry and logging
03. Fishing and aquaculture

SECTION B: MINING AND QUARRYING

05. Mining of coal and lignite
06. Extraction of crude petroleum and natural gas
07. Mining of metal ores
08. Other mining and quarrying
09. Mining support service activities

SECTION C: MANUFACTURING INDUSTRY

10. Manufacture of food products
11. Manufacture of beverages
12. Manufacture of tobacco products
13. Manufacture of textiles
14. Manufacture of wearing apparel
15. Manufacture of leather and related products
16. Manufacture of wood and of products of wood and cork, except furniture; manufacture of articles of straw and plaiting materials
17. Manufacture of paper and paper products
18. Printing and reproduction of recorded media
19. Manufacture of coke and refined petroleum products
20. Manufacture of chemicals and chemical products
21. Manufacture of basic pharmaceutical products and pharmaceutical preparations
22. Manufacture of rubber and plastic products
23. Manufacture of other non-metallic ore products.

24. Manufacture of basic metals
25. Manufacture of metal products, except machinery and equipment
26. Manufacture of computer, electronic and optical products
27. Manufacture of electrical equipment
28. Manufacture of machinery and equipment n.e.c.
29. Manufacture of motor vehicles, trailers and semi-trailers
30. Manufacture of other transport equipment
31. Manufacture of furniture
32. Other manufacturing
33. Repair and installation of machinery and equipment.

SECTION D: ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY

35. Electricity, gas, steam and air conditioning supply

SECTION E: WATER SUPPLY, SEWERAGE, WASTE MANAGEMENT AND REMEDIATION ACTIVITIES

36. Water collection, treatment and supply
37. Sewerage
38. Waste collection, treatment and disposal activities; materials recovery
39. Remediation activities and other waste management services

SECTION F: CONSTRUCTION

41. Construction of buildings
42. Civil engineering
43. Specialised construction activities

SECTION G: WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES

45. Wholesale and retail trade and repair of motor vehicles and motorcycles

- 46. Wholesale trade and trade intermediaries, except of motor vehicles and motorcycles
- 47. Retail trade, except of motor vehicles and motorcycles

SECTION H: TRANSPORTATION AND STORAGE

- 49. Land transport and transport via pipelines
- 50. Water transport
- 51. Air transport
- 52. Warehousing and support activities for transportation
- 53. Postal and courier activities

SECTION I: ACCOMMODATION AND FOOD SERVICE ACTIVITIES

- 55. Accommodation services
- 56. Food and beverage service activities

SECTION J: INFORMATION AND COMMUNICATIONS

- 58. Edition
- 59. Motion picture, video and television programme production, sound recording and music publishing activities
- 60. Programming and broadcasting activities
- 61. Telecommunications
- 62. Computer programming, consultancy and related activities
- 63. Information service activities

SECTION K: FINANCIAL AND INSURANCE ACTIVITIES

- 64. Financial service activities, except insurance and pension funding
- 65. Insurance, reinsurance and pension funding, except compulsory Social Security
- 66. Activities related to financial services and insurance

SECTION L: REAL ESTATE ACTIVITIES

- 68. Real estate activities

SECTION M: PROFESSIONAL, SCIENTIFIC AND TECHNICAL ACTIVITIES

- 69. Legal and accounting activities
- 70. Activities of head offices; management consultancy activities
- 71. Architectural and engineering activities; technical testing and analysis
- 72. Scientific research and development
- 73. Advertising and market research
- 74. Other professional, scientific and technical activities
- 75. Veterinary Activities

SECTION N: ADMINISTRATIVE AND SUPPORT SERVICES ACTIVITIES

- 77. Rental and leasing activities
- 78. Employment activities
- 79. Travel agency, tour operator and other reservation services and related activities
- 80. Safety and research activities
- 81. Services to buildings and landscape activities
- 82. Administrative activities of the office and other ancillary activities to the companies

SECTION O: PUBLIC ADMINISTRATION AND DEFENCE, COMPULSORY SOCIAL SECURITY

- 84. Public Administration and defence, compulsory Social Security

SECTION P: EDUCATION

- 85. Education

SECTION Q: Human health and social work activities

- 86. Human health activities
- 87. Residential care activities
- 88. Social work activities without accommodation

SECTION R: ARTS, ENTERTAINMENT AND RECREATION

- 90. Creative, arts and entertainment activities
- 91. Libraries, archives, museums and other cultural activities
- 92. Gambling and betting activities
- 93. Sports activities and amusement and recreation activities

SECTION S: OTHER SERVICE ACTIVITIES

- 94. Activities of membership organisations
- 95. Repair of computers and personal and household goods
- 96. Other personal service activities

SECTION T: ACTIVITIES OF HOUSEHOLDS AS EMPLOYERS; UNDIFFERENTIATED GOODS-AND SERVICES-PRODUCING ACTIVITIES OF HOUSEHOLDS FOR OWN USE

- 97. Activities of households as employers of domestic personnel
- 98. Undifferentiated goods- and services-producing activities of private households for own use

SECTION U: ACTIVITIES OF EXTRATERRITORIAL ORGANISATIONS AND BODIES

- 99. Activities of extraterritorial organisations and bodies
